

LOGITECH TAP IP

- The "original" Logitech TAP (known as Logitech TAP 5e) is connected directly to a PC/Rally Bar/Roommate via USB or USB/LAN dongle. It can be used as a control element for the Appliance Mode of the Rally Bar versions, Roommate or with PC/Mac as Zoom Room/Teams Room Controller. The Tap also has an HDMI input with which HDMI signals can be fed into a video conference (with the Tap IP, for example, the HDMI input of the Rally Bar can be used for this).
- The Tap IP is, as the name suggests, integrated into the network and supplied with power via PoE. It can be used as a control element for the Appliance Mode of the Rally Bar versions, Roommate or as Zoom Room Controller.
- Logitech has launched the Tap IP, a **network-based meeting room controller** that is fully integrated with leading collaboration platforms and connected by a **single Power over Ethernet (PoE)** cable for clean, simple installation.
- The Tap IP is like the Logitech Tap that was launched in 2019. However, the Tap IP is cheaper and is easier to connect to the network over ethernet with PoE or Wi-Fi. It can be mounted on a wall or table for use and easy sharing and comes in either graphite or white.
- Combine the Tap IP with a **Logitech conference cam** and start meetings with just one touch on the **10.1-inch screen** that is compatible with leading video conferencing solutions. Like other Logitech conferencing equipment, the Tap IP is built on open standards, enabling a broader set of integrations, for example with interactive whiteboards, room control functions, and more.
- Please see the platform compatibility table on the next page.

Platform Compatibility

Video Conferencing Platform	Logitech Tap IP Compatibility	Logitech Tap Compatibility
Google Meet	--	Certified
Microsoft Teams Rooms on Android	Certified	Certified
Microsoft Teams Rooms on Windows	--	Certified

Zoom Rooms for Mac	Certified	--
Zoom Rooms for Windows	Certified	Compatible*
GoTo Rooms (appliance-based)	--	Certified
Pexip (appliance-based)	--	Certified
RingCentral Rooms (appliance-based)	Certified	Certified
Tencent Meeting Rooms	Certified	Certified

Note: Certification programs include those offered by certain partners like Microsoft and Zoom, as well as by Logitech, that help ensure a reliable user experience for enterprise-grade video conferencing.

*Zoom does not currently have a formal certification program for USB-connected controllers like Logitech Tap. When Tap is directly Connected to Logitech Rally Bar or to Rally Bar Mini, they are Zoom-certified as all-in-one room systems.
